

Tailor-made illuminated shelves

The **Snap-In Lightboard** is a very elegant and easy-to-install illuminated shelving solution for retail shops. It has proved particularly successful in optician's shops, perfume shops and beverage shops – wherever premium products need to be showcased in a sophisticated way.

New with improved conductor rail

The **Snap-In Lightboard** is a variant of our Luminous Panel featuring an electrified shelf support system. The support system with a built-in conductor rail is designed to be installed into vertical panels from the rear. Thanks to modified spring pins, there are no disturbing cables, and the board fits flush with the rear panel. The light is absolutely homogeneous, shining upwards and downwards. When the product range changes, the boards can be exchanged without any tools saving valuable time.

Tailor-made solution

Customers can specify the dimensions, light colour and edge banding.
